See the dues before releasing a new order

A dealer wants stock today. Accounts and sales need the same picture before the owner decides what can be dispatched.

"Dealer ka payment pending hai. Naya order release kar sakte hain?"

Review item	Amount
Verified outstanding invoices	Rs 1,40,000
Other approved, uninvoiced orders	Rs 30,000
New order requested	Rs 60,000
Exposure if all are released	Rs 2,30,000
Example internal limit	Rs 2,00,000

An example answer

The proposed exposure is Rs 2,30,000, which is Rs 30,000 above this example's internal limit. A promise to pay does not reduce today's dues. A confirmed Rs 40,000 receipt would bring exposure to Rs 1,90,000 if counted once.

A next step to approve

Ask accounts to confirm receipts, disputed bills and overdue invoices. Then record the owner's decision: permitted dispatch value, conditions and expiry. Being within the limit does not by itself approve overdue bills or settle a dispute.

A specific follow-up

"Payment promise mila hai, receipt abhi confirm nahi hai. Accounts balance check kare; dispatch ke liye approved amount alag se batayein."

Why this helps

The owner sees existing dues and fresh commitments together. The dispatch team receives a specific decision instead of an ambiguous "approved".

Records needed

Customer and company; dated balance; overdue invoices; confirmed receipts; disputed documents; uninvoiced orders; proposed dispatch; owner-approved credit rules.

Assumptions: Amounts use the same payable-value basis. Other orders are not already in the invoice balance. The Rs 2,00,000 limit is fictional, not credit advice. Do not subtract a receipt again after it is included in a refreshed balance.

Illustrative business example, not a customer case study. Figures and conversations are fictional. These show proposed ways an assistant could help; they are not a list of available features. Dhandha GPT's current Empire connector reads a local snapshot for supported questions. It does not send follow-ups, place orders or approve dispatches.
